What did we learn?

- We need endless numbers of copies of
- We need a filing sytem for all
- We all have to arrive at Sunday September
- We save a lot of time by filling all the forms before arriving in Indonesia

Planning

- **Sunday 19 september:** Arrival in Jakarta
- **Monday 20 september:** Ristek and Immigrasi
- **Tuesday 21 september:** as soon as pictures and fingerprints have been taken to Bandung
- **Wednesday 22 september – Monday 27**

Why East Kalimantan?

DIE ANTHOZOENFAUNA DES JUNGTERTIÄRS VON BORNEO

VON

H. GERTH.

Bis vor kurzem waren von Borneo nur Korallen aus alttertiären Schichten bekannt. Es waren die Korallen die VERBERK in Nummulitenkalken in Südostborneo gesammelt hatte und die 1875 von v. FRITSCH beschrieben worden waren. 1921 hat dann FELIX eine grössere Suite jungtertiärer Korallen bearbeitet, die teils von WANNER in niederländisch Ostborneo, teils von STAMM in Britisch Nordborneo gesammelt worden waren. Das Leidener Museum besass nun noch eine Sammlung besonders gut erhaltener Korallen, die RUTZEN in der Umgebung der Sangkoelirangbai in Ostborneo gesammelt hatte. Ferner erwarb das Museum eine grössere Kollektion von Fossilien, die M. SCHMIDT an verschiedenen Fundpunkten in der Umgebung derselben Bai gesammelt hatte. Darunter befanden sich vor allem eine grosse Anzahl interessanter Einzelkorallen. Unter dem Korallenmaterial dieser beiden Sammlungen waren bereits so viele neue Formen, die FELIX nicht vorzulegen hatten, dass ihre Bearbeitung wohl lohnens-
